

ArtHub (Pinterest-like Android App)

ArtHub is a mobile application inspired by Pinterest, and was done as part of SP2 project

☆☆ Features

- 📷 Upload and view photo posts
 - 📁 Save posts into custom folders (collections)
 - 💬 Write and view comments under posts
 - 🔍 Explore visual content from other users
 - ❤️ Clean and responsive Material UI
-

🔧 Tech Stack

Component	Description
Kotlin	Primary programming language
Retrofit	HTTP client for networking and API calls
Room Database	Local storage for offline data persistence
Koin	Lightweight dependency injection framework
Material Design 3	Modern UI components and styling
Material Design 1	Some legacy components for specific views

Architecture

The app follows a **MVVM** (Model-View-ViewModel) architecture for better separation of concerns and testability.

- **ViewModels** handle UI logic and expose data to the views
 - **Repositories** interact with both the API (via Retrofit) and local database (Room)
 - **Dependency Injection** is managed with Koin modules for scalability and clarity
-

Getting Started

Prerequisites

Property	Value
Namespace	com.example.art
Compile SDK	34

Property	Value
Target SDK	34
Min SDK	24
Compose Compiler	1.5.1
Java Compatibility	Java 8

⚠ Server Dependency

This application is **client-side only** and relies entirely on a backend server for its core functionality (e.g., posting, saving, loading, commenting). Please ensure the server is running and reachable via the specified API URL (see `strings.xml`) before launching the app.
